- Preparing to enter the water on the way to the launch site. Preventing the spread of invasive species is a priority. If they arrive, removal is next impossible.
Canada National Parks Act (General Fishing Regulations)

Fish Consumption Advisory (Mercury) Mountain Parks

Mercury is a natural occurrence in some fish, and can come from natural sources (e.g., soil and sediments) or can be introduced to the parks (e.g., through the atmosphere). Mercury in fish can vary seasonally and can vary in concentrations in top predator fish. Fish tested in some park waters have elevated mercury levels. If you are pregnant or breastfeeding, or have any health concerns about mercury in fish, you should talk to your health care provider before consuming fish from these areas.
