1.0 Introduction

Parks Canada manages one of the finest and most extensive systems of protected natural and historic places in the world. The Agency’s mandate is to protect and present these places for the benefit and enjoyment of current and future generations. Future-oriented, strategic management of each national park, national marine conservation area, heritage canal and those national historic sites administered by Parks Canada supports the Agency’s vision:

“Canada’s treasured natural and historic places will be a living legacy, connecting hearts and minds to a stronger, deeper understanding of the very essence of Canada.”

The Canada National Parks Act and the Parks Canada Agency Act require Parks Canada to prepare a management plan for each national park. The Tongait KakKasuangiita SilakKijapvinga – Torngat Mountains National Park Management Plan, once approved by the Minister responsible for Parks Canada and tabled in Parliament, ensures Parks Canada’s accountability to Canadians, outlining how the management team of this national park will achieve measurable results in support of the Agency’s mandate.

This management plan, the 2nd for Tongait KakKasuangiita SilakKijapvinga, replaces the 2010 management plan. This plan was developed cooperatively with the Inuit of Nunavik (Québec) and the Inuit of Nunatsiavut (Labrador) and sets clear, strategic direction for the management and operation of these sites by articulating a vision, key strategies and objectives. The plan builds on previous commitments and management plan objectives, furthering the achievements over the past 10 years. Parks Canada will report annually on progress toward achieving the plan objectives and will review the plan every ten years or sooner if required.

This plan is not an end in itself. Parks Canada and the Cooperative Management Board will maintain an open dialogue on the implementation of the management plan to ensure that it remains relevant and meaningful. The plan will serve as the focus for ongoing engagement on the management of Tongait KakKasuangiita SilakKijapvinga in years to come.

2.0 Significance of Tongait KakKasuangiita SilakKijapvinga

Tongait KakKasuangiita SilakKijapvinga was established to protect a representative example of the Northern Labrador Mountains natural region, one of 39 natural regions across the country identified by Parks Canada’s National Parks System Plan, so that it could be enjoyed by this and future generations. The park was also established because Inuit recognized the opportunity to protect for all time, through their respective land claims agreements, this important portion of their ancestral homeland. The long story of park establishment highlights the importance of developing respectful and honest relationships with Inuit as equal partners, while recognizing their inherent connection to the land. Today the national park, which was once a foreign and threatening concept to Inuit, is seen as an important tool to allow Inuit to protect, pass down and share their culture. It also provides an opportunity to recognize and honour Inuit knowledge and the special historical and cultural relationship between Inuit and the land as part of the living legacy of this park. Inuit also see the park as an important contributor to the social and economic well-being of the region. Tongait KakKasuangiita SilkKijapvinga provides opportunities for Inuit, visitors, tour operators and researchers to better understand and share this unique part of Canada. Labrador Inuit, Nunavik Inuit and Parks Canada continue to tell the fascinating story of Tongait KakKasuangiita SilakKijapvinga and its people to the world.
Tongait KakKasuangita SilakKijapvinga, encompassing 9,700 km², protects and presents a spectacular Arctic wilderness and a magnificent Inuit cultural landscape. The Torngat Mountains are among the highest, most rugged mountains in eastern North America and provide one of the world’s most beautiful coastlines. Breathtaking fiords with sheer cliff walls up to 900 metres high penetrate inland from the waters of the Labrador Sea. The mountain peaks contain small glaciers, remnants from the last ice age. Gentle river valleys that wind through these mountains provided ancient travel routes between what is today Labrador and Québec that continue to be used by Inuit into the present day.

The climate of the park is generally harsh and is influenced by altitude, latitude, and the nearby Labrador Sea. The park is located entirely north of the tree-line. Although vegetation is sparse, Inuit and their predecessors have known and used the tundra plants and those that grow in the protected valley sites for millennia.

The national park is home to a variety of wildlife. It includes much of the range of the small Torngat Mountains caribou herd, as well as a portion of the range of the George River caribou herd which was, at one time, the world’s largest. Polar bears frequent the area, and a unique population of tundra-dwelling black bears is also present. Wolves and Arctic fox live here. Many species of birds nest in the park’s diverse habitats and its coastline is an important migration route for Arctic birds. The Inuit have long understood the movements and migrations of the wildlife of Tongait KakKasuangita SilakKijapvinga, and continue to hunt and fish in the park throughout the year.

The park is home to five regularly occurring species-at-risk. The following are designated as “species of special concern”: Barrow’s Goldeneye (Eastern population), Harlequin duck (Eastern population), Short-eared owl, the Polar bear and the Peregrine falcon sub-species tundrius. The Peregrine falcon sub-species anatum is listed as threatened. Other species-at-risk may occur in the park.

3.0 Planning Context

Tongait KakKasuangita SilakKijapvinga was established to protect heritage resources and to provide opportunities for Canadians to connect to the Northern Labrador Mountains natural region – an Inuit homeland. The Torngat Mountains National Park Reserve was created with the consent of Labrador Inuit provided through the Labrador Inuit Land Claims Agreement and transitioned to a national park with the consent of Nunavik Inuit provided through the Nunavik Inuit Land Claims Agreement.

The park extends from Saglek Fiord in the south, including all islands and islets, to the very northern tip of Labrador; and from the provincial boundary with Québec in the west, to the low water mark of the Labrador Sea in the east. The Iron Strand, 9 kilometres of land found on the Labrador coast, is Inuit Owned Lands and is excluded from the park. The mountain peaks along the border with Québec are the highest in mainland Canada east of the Rockies.

Evidence of human history spanning thousands of years is found throughout the park. Today Inuit continue to use this area for hunting, fishing, and travelling throughout the year. More than a wilderness, this is an Inuit homeland. It is a place where Inuit say “Alianattuk”, which means “this is a good place to be”.

The First Ten Years

Parks Canada spent time on the land with Inuit from Nunavik and Nunatisavut and the Cooperative Management Board to understand more about the land, wildlife, history, culture and Inuit connections to the land. This provided opportunities to hear their
stories and, with the participation of Inuit, weave these stories into experiences for visitors to the park.
Parks Canada staff have spent the first ten years working with the Cooperative Management Board to determine the stories we want to share with visitors and to find ways to facilitate opportunities for Inuit – elders and youth – to spend time in the park to strengthen connections to this land and to keep our relationship with each other strong.

This management plan reflects our shared experience in the first 10 years of park management and continues to build on the relationships and commitments established in the Foundation Agreements.

**Guiding Documents**
In addition to Parks Canada legislation and policies, the management and operations of Tongait KakKasuangita SilakKijapvinga are directed by the Nunavik Inuit Park Impacts and Benefits Agreement (Nunavik Inuit PIBA) between Parks Canada and Makivik Corporation (representing the Inuit of Nunavik, Québec), and the Labrador Inuit Park Impacts and Benefits Agreement (Labrador Inuit PIBA) between Parks Canada and the Labrador Inuit Association (now the Nunatsiavut Government). The Memorandum of Agreement for a National Park Reserve of Canada and National Park of Canada in the Torngat Mountains between the Government of Canada and the Government of Newfoundland and Labrador sets out the conditions for the transfer of the land from provincial jurisdiction to federal jurisdiction. This agreement, along with the two land claims agreements and the two PIBAs are considered the “Foundation Agreements”.

The Foundation Agreements provide clear direction and guidance on delivering on all three of Parks Canada’s mandate elements in addition to direction on how to accommodate Inuit rights and interests in the management of the park. The Foundation Agreements span jurisdictional and provincial boundaries, three levels of government and two different Inuktitut writing systems. Implementing these agreements must be done in consultation with the Cooperative Management Board, so that the spirit and intent of these agreements is respected and remains the inspiration for setting priorities in managing the park.

**Cooperative Management Board**
Tongait KakKasuangita SilakKijapvinga is cooperatively managed with Labrador Inuit and Nunavik Inuit. The mandate of the Cooperative Management Board is to provide advice to the Federal Minister responsible for the Parks Canada Agency on matters related to park management. In addition, the role of the Cooperative Management Board is to provide advice to the Torngat Wildlife and Plant Co-Management Board, the Torngat Joint Fisheries Board, the Makivik Corporation, the Nunatsiavut Government and other agencies on all matters related to management of the national park and other matters related to the national park for which advice is requested. In providing advice, the Cooperative Management Board does not represent Parks Canada. Matters for which the Cooperative Management Board may provide advice include research priorities, visitor access to and use of the park, removal of carving stone, changes to the national park boundary, economic opportunities and the management plan. A full list of the matters on which the Cooperative Management Board can provide advice to the Federal Minister responsible for the Parks Canada Agency can be found in section 4.5 of the PIBAs.

**Partners**
The Foundation Agreements identify the key partners of Tongait KakKasuangita SilakKijapvinga – Makivik Corporation, Nunatsiavut Government and the Government of Newfoundland and Labrador. Parks Canada’s relationship with all three partners is vital to achieving the mutual objectives and priorities identified by Parks Canada and Inuit.

These partners have observer status (as per the Foundation Agreements) and attend the Cooperative Management Board meetings.
4.0 Vision

The vision is a critical component of the management plan, providing a focus for future management directions for the park. This vision articulates the special character of Tongait KakKasuangita SilakKijapvinga and paints a picture of the park 15 years from now, conveying a sense of place to Canadians who may never be able to visit the site. The following vision was developed with the Cooperative Management Board and reflects the interests and desires of the Cooperative Management Board, Inuit Partners and Parks Canada.

Tongait KakKasuangita SilakKijapvinga is a place of rugged coastline, deep fiords, steep mountain ranges – a place where wildlife abounds - awe inspiring landscape of great spiritual importance to Inuit. Travelling through the land of Inuit, one is struck by the smell of Labrador tea underfoot, the tapestry of colours and textures of the landscape, the speckling of archaeological sites silently conveying stories of the past and the overwhelming feeling that the mountains are alive. Northern lights blaze in the night sky. This is an Inuit homeland described as “Alianattuk” – a good place to be.

Inuit once again use and occupy their traditional places in the Torngat Mountains, reinforcing their connection to the ecological and spiritual elements of this Inuit homeland. Inuit Elders are reunited with old friends and memories as they return to traditional places they knew as children. These memories and the connections Inuit have with the land form the story that is passed on to the youth of the region and shared with Canadians. This is the true testament to the elemental integrity of this environment.

Tongait KakKasuangita SilakKijapvinga is managed in a spirit of partnership and cooperation with Inuit. It is a model of cooperative management where the spiritual significance and the cultural and ecological integrity of the park are protected. Working with Inuit partners, Canadians enjoy, discover and understand the special relationship that Inuit have with this Inuit homeland. The spirit and intent of the establishment of Tongait KakKasuangita SilakKijapvinga is honoured and celebrated.

Great feelings of serenity and community fill those visiting the park as they share a meal of freshly-caught Arctic char in a fiord surrounded by snow-capped cliff faces revealing billions of years of the creation of earth, while listening to the sound of the Inuktitut language as Inuit Elders share their stories of life on the land. As a premiere Indigenous tourism experience in the Canadian north, people of different cultural backgrounds come to the Torngat Mountains to learn about and experience the park through Inuit eyes.

Strong relationships with partners and stakeholders provide the opportunity to facilitate exceptional visitor experiences and for Canadians to create personal connections to the park. It is through these relationships that the park contributes to the economic and social well-being of the region. Canadians, from as far away as Montreal and Vancouver, discover and appreciate the beauty and richness of this Inuit homeland from the comforts of their homes, offices and schools.

Inuit open their homeland to Canadians, and together Parks Canada and Inuit partners bring people to the park and the park to Canadians.
5.0 Key Strategies

A defining feature of this park is the close relationship that Parks Canada has with our Inuit partners – the Nunatsiavut Government, Makivik Corporation and the Cooperative Management Board for the Tongait KakKasuaginta SilakKijapvinga. Together we have developed a shared vision for the park that has involved joint collaboration on some key initiatives. This is especially true of the Torngat Mountains Base Camp and Research Station and all of the associated visitor, youth and research objectives and targets. Specific timelines and quantifiable targets are often not possible to predict at this point because we are only one party in a multi-party initiative. Unless otherwise indicated, the timelines for achieving the objectives and targets identified below are intended to be achieved within the next ten year planning period.

The objectives and targets referred to in this plan are intended to meet Parks Canada’s commitments in our respective Park Impacts and Benefits Agreements with the Nunatsiavut Government and Makivik Corporation and reflect and respect the solid relationships we have built during the first ten years to carry us forward. The objectives and targets are written in a way to emphasize the results that we are aiming to achieve over the period of this plan. Annual implementation updates will be prepared for the Cooperative Management Board, partners, stakeholders and the general public to highlight the progress that has been made towards these desired results.

**Key Strategy 1: New Gatherings – From Sea to Sky**

This strategy will look at new ways to connect with Tongait KakKasuaginta SilakKijapvinga by broadening the opportunities to explore the park in the valleys and the mountains, to hear the stories of the Inuit homeland, and to support Inuit businesses and Inuit employment. By attracting more visitors and researchers to the park, Base Camp will in turn be more sustainable. The Torngat Mountains Base Camp and Research Station has become the gateway to the national park, having evolved from a modest pilot project 10 years ago to an Inuit-owned and managed business. This strategy focuses on Base Camp becoming a sustainable operation financially, culturally, and environmentally so it can continue to support visitors, researchers, the Cooperative Management Board, and Inuit elders and youth to connect with the land and the stories in the park and with each other.

**Objective 1.1**

Tongait KakKasuaginta SilakKijapvinga is a popular research destination both nationally and internationally that solicits researchers willing to conduct research responsive to Inuit priorities.

**Target**

- Research opportunities are increased and research programs extend Base Camp operation into the shoulder season.

**Objective 1.2**

Visitor experience opportunities are enriched with new adventures and learning opportunities.

**Targets**

- Increased visitor opportunities associated with the research station and research projects.
- Park visitation shows an increasing trend in the next State of Park assessment.
• Visitors report that they enjoyed their visit in the park.

Objective 1.3
Market-ready tourism products and promotional campaigns are developed and implemented with partners.

Targets
• Park visitation shows an increasing trend in the next State of Park assessment.
• Tongait KakKasuugita SilakKijapvinga becomes a Northern Iconic Experience of choice and is promoted to national and international markets within five years of plan approval.
• Tourism partners such as Destination Labrador and Tourism Newfoundland and Labrador collaborate with Parks Canada on travel media and co-operative marketing initiatives.

Objective 1.4
Through a collaborative process, Parks Canada, partners and stakeholders have developed a plan and business model to achieve the sustainability of Base Camp.

Targets
• Park visitation shows an increasing trend in the next State of Park assessment.
• Research opportunities are increased and research programs extend Base Camp operation into the shoulder season.
• A vibrant youth program brings Inuit youth into the park and connects them with Inuit elders, researchers, and cultural performers within five years of plan approval.
• The Tongait KakKasuugita SilakKijapvinga offer increases and enhances the appeal of Base Camp as a regional hub for tourism and research by making it a value-added destination.

Objective 1.5
Cruise ship operators understand and convey Tongait KakKasuugita SilakKijapvinga messages to clients and park visitors.

Targets
• Parks Canada, in collaboration with the Cooperative Management Board, finalizes a cruise ship protocol by 2019.
• Parks Canada collaborates with cruise ship operators to determine effectiveness of the cruise ship protocol within five years of plan approval.

Objective 1.6
Aircraft access in the park is controlled and managed by Tongait KakKasuugita SilakKijapvinga staff.

Targets
• In consultation with Parks Canada enforcement staff, monitor non-compliance of aircraft access regulations in Tongait KakKasuugita SilakKijapvinga within five years of plan approval.
Key Strategy 2: Honouring Our Commitments

Parks Canada will work with the Nunatsiavut Government, Makivik and the Cooperative Management Board to maintain the ecological integrity and cultural heritage values of the park, recognize and honour Inuit Knowledge and the connection Inuit have with the land and provide opportunities for Inuit and Inuit businesses. Managing the park, in a cooperative relationship, is essential to achieve the spirit and intent of the Foundation Agreements and the Cooperative Management Board is key to ensuring the success of Tongait KakKasuangita SilakKijapvinga. This strategy continues to focus on achieving a shared vision for Tongait KakKasuangita SilakKijapvinga with our partners.

Objective 2.1

A robust sustainable monitoring plan is in place to protect natural and cultural resources in order to contribute to the ecological integrity and heritage values of the area.

Targets

- The Tongait KakKasuangita SilakKijapvinga ecological integrity monitoring program is complete and fully operational (i.e., includes five measures each for the Tundra and Freshwater ecosystem indicators).
- A cultural resource management strategy that includes guidelines for monitoring is developed within five years of plan approval.

Objective 2.2

While retaining authority in the park, Parks Canada supports and encourages the development of a multi-jurisdictional management strategy for the Torngat Mountains Caribou herd that respects the cultural importance of a sustainable harvest, in Tongait KakKasuangita SilakKijapvinga and on adjacent lands, to Inuit from Nunatsiavut and Nunavik and ensures the long term viability of the herd.

Target

- A multi-jurisdictional Caribou technical committee is established to guide research and monitoring of the Torngat Mountains Caribou herd and a collaborative monitoring and research plan or approach is in place that supports an assessment of the Caribou population at regular intervals as agreed upon by the technical committee.

Objective 2.3

Through a collaborative approach, the heritage values of Tongait KakKasuangita SilakKijapvinga are identified and principles are developed that guide decisions on the management of cultural resources and how these places and stories will be shared.

Targets

- A cultural resource values statement and management strategy that includes guidelines for monitoring is developed within five years of plan approval.
- Priority areas for cultural resource protection and presentation have been identified by the Cooperative Management Board.
Objective 2.4
Tongait KakKasuautita SilakKijapvinga provides economic and employment opportunities to Inuit and Inuit businesses in Labrador and Québec.

Targets
• An partnership summit with the Nunatsiavut Government and Makivik is held at Base Camp and in the park in 2018 to explore future economic partnership opportunities.
• A strategy for reaching markets in Québec is developed and implemented by 2021.
• Identify tourism partners in Québec and Newfoundland and Labrador to collaborate on travel media and marketing initiatives.
• 70% of Tongait KakKasuautita SilakKijapvinga contracts are awarded to Nunavik/Nunatsiavut Inuit, or Nunavik/Nunatsiavut Inuit businesses.

Objective 2.5
Inuit are engaged in research projects and results are shared with Inuit and others.

Targets
• Inuit participation in research projects will be monitored and reported on five years after plan approval and then again at the end of the planning cycle.
• Researchers make the findings of their work available to Inuit in a plain language format, explaining its relevance in both English and Inuktitut consistent with timelines in their research permits.

Key Strategy 3: Sharing the Inuit Story - Tongait KakKasuautita SilakKijapvinga through an Inuit Cultural Lens
Sharing the Inuit story is vital for connecting Inuit, visitors, and Canadians to Tongait KakKasuautita SilakKijapvinga and fostering an understanding of the cultural and historical significance of this Inuit homeland. This strategy will document the stories from Elders to promote awareness among youth and visitors. Honouring Inuit knowledge will be a living legacy for the park. Expanding the reach of Inuit stories with visitors and Canadians will improve the understanding and appreciation of why Tongait KakKasuautita SilakKijapvinga is a special place.

Objective 3.1
Stories from Elders are documented and are used to tell the story of Tongait KakKasuautita SilakKijapvinga, promoting awareness among youth and visitors.

Targets
• An oral history project involving Elders is initiated within three years of plan approval.
• Place names continue to be gathered and a plan is developed for sharing them with Inuit, visitors, and Canadians.
• Where appropriate, research documents Inuit knowledge of the human history, land, and resources of Tongait KakKasuautita SilakKijapvinga.
Objective 3.2
Elders and youth connect to preserve the Inuit culture of the Park.

Target
• A story telling program is developed by Parks Canada as part of the visitor experience opportunities and shared on websites and with news media to amplify reach within five years of plan approval.

Objective 3.3
The Inuit connection and re-connection to the land has expanded and the Inuit story has broadened.

Targets
• The number of opportunities for Inuit to spend time in the park has increased within five years of plan approval.
• Interactive media is developed and implemented by 2028.

Objective 3.4
Tongait KakKasuangita SilakKijapvinga is showcased with urban audiences in target cities that will be recommended by the Cooperative Management Board.

Target
• The number of urban outreach contacts has increased within five years of plan approval.

6.0 Management Areas

Park staff and the Cooperative Management Board have identified eight management areas in the park based on their sensitive natural and cultural resources and their importance in telling the Inuit story to visitors and Canadians. Five areas in the southern portion of the park are destinations for visitors and therefore, require guidelines for the protection of the natural and cultural resources. Three of the areas in the northern portion of park are sensitive sites that are difficult for visitors to access but may be part of the visitor experience in the future.

The five areas in the southern portion of the park share similar management challenges and issues related to the provision of visitor access, facilitation of engaging experiences, and the protection of sensitive natural and cultural resources. Aggigiak is the only area located in Zone III, whereas the other seven areas are located in Zone II. Management objectives and targets have been developed for all eight areas, which are described below.

Aggigiak (Saglek Bay), a small cove inside of Branagin Island, in Saglek Bay, has been used by Inuit and their predecessors for centuries. It is rich with cultural resources including sod house formations, food caches, hunting blinds, and other cultural features that remain to this day. Aggigiak is strategically located to allow visitors access into the park through a Parks Canada Satellite Camp. Once in the park, visitors can access a network of high elevation hiking routes that are in the planning stage, and can experience and learn about the significance of the cultural resources and important heritage values of this area.

Sallikuluk (Rose Island) is where, in the recent past, Inuit lived and hunted whales and seals in the cold and ice-packed waters of the Labrador Sea. The island is dwarfed by the spectacular cliff faces that rise from Saglek Fiord, and is home to numerous individual graves, a mass reburial, and two villages of sod houses. Deeply layered archaeological sites span more than 5000 years of occupation and are an important part of the baseline
for understanding the human history of Torngat Mountains. Sallikuluk is a focal point of the Inuit cultural landscape in Saglek Fiord.

**Ramah** is an area rich in both natural and cultural resources, linking the Inuit of today to their predecessors. The area, which includes both the kitjigattalik-Ramah Chert Quarries National Historic Site and the Ramah Mission, has been identified by Inuit as needing special management direction to protect resources while sharing the importance of the area with Canadians. Special access guidelines will be required for kitjigattalik-Ramah Chert Quarries National Historic Site.

**Silluak (North Arm)** is also recommended for area management as it has become a popular gathering place and destination for tourists. Silluak (North Arm) has been used by Inuit and their predecessors for thousands of years. There is a wealth of natural and cultural resources including traditional graves, sod houses, food caches, etc. Following an archaeological survey and inventory, visitor access will be facilitated to the area in the company of Parks Canada interpretive staff. There is a desire to improve our understanding of the story of North Arm.

**Pitukkik (Nakvak Brook)** is a traditional travel route that has linked Inuit from Nunavik (northern Québec) and Nunatsiavut (northern Labrador) for generations - first by foot or by dog team and now, in modern times, by snowmobile. In 2006, an Inukshuk was erected by the park Cooperative Management Board to honour this ancient travel route and to showcase its importance today. Numerous archaeological features have been identified and visitors can experience the site in the company of Parks Canada staff along pre-determined routes.

**Objectives for Management Areas in the Southern Portion of Tongait KakKAsuanita SilakKijapvinga**

- Visitors enjoy, discover, and learn about the Inuit story on Aggigiak, Sallikuluk, Ramah, Silluak and Pitukkik while cultural and natural resources are protected for the enjoyment of future generations.
- The importance of Inuit stories and the protection of resources is conveyed directly by Inuit through interpretive material and on-line media.
- Canadians understand and appreciate the significance of the Inuit stories told at Aggigiak, Sallikuluk, Ramah, Silluak, and Pitukkik.
- Aggigiak (Saglek Bay) is promoted and managed as a satellite camp, providing visitors with orientation to the ecological resources and heritage values of the park.
- Access routes and guidelines for kitjigattalik-Ramah Chert Quarries National Historic Site are developed.

**Targets:**

- Guidelines for visitor use are developed and implemented within two years of plan approval.
- The visitor safety plan is implemented with partners within the first year of plan approval.
- Visitors report that they enjoyed their visit.
- Visitors indicate that they learned something about the natural and cultural heritage of the park.
- Visitors report that they have experienced a connection to the land through an Inuit cultural perspective.

The three management areas in the northern portion of the park are Upingivik, Kangalaksiorvik Lake, and Nachvak Lake.
Upingivik is in the most northerly reaches of Tongait KakKasuangita SilakKijapvinga and is a traditional whale hunting area still used by Inuit. This management area represents a small, low-lying area with a spectacular rock face as a backdrop, supported by a rich and extensive marine environment in which Parks Canada has no jurisdiction. The area offers possibilities for Nunavik and Nunatsiavut Inuit to collaborate on contemporary practices of traditional hunts for species such as beluga whales. The area has large quantities of ruby red garnets. Inuit have expressed the need to explore opportunities to bring people to Upingivik and the types of experiences that they could facilitate.

Kangalaksiorvik Lake supports a population of Kassigiak (harbour seals). There is keen interest on the part of the Nunatsiavut Government and the Cooperative Management Board to initiate a collaborative research program to investigate the seal population and the freshwater habitat. In order to protect the integrity of the seals and their habitat, this area has been identified as a special management area and has been removed from the list of designated landing areas. However, aircraft access for purposes of research can be permitted on a case by case basis.

Nachvak Lake situated west of Nachvak Fiord is a traditional place where Inuit fish for Arctic Char. It has also been a place where, in the past, unregulated sports fishing occurred so it is important to ensure this lake remains ecologically intact by ensuring that visitors understand there is no fishing in freshwater in the park and float planes are not permitted to land in the lake.

Objectives for Management Areas in the Northern Portion of Tongait KakKasuangita SilakKijapvinga

- Visitors have the opportunity to experience the importance of Upingivik, and Kangalaksiorvik Lake through off-site interpretation.
- Opportunities for visitor access are explored in cooperation with the Cooperative Management Board, Makivik and Nunatsiavut Government.
- The sensitivity of Nackvak Lake to visitors is evaluated and the need for zoning considered.

Targets:

- Develop off-site interpretation products for Upingivik.
- The feasibility of identified visitor opportunities at Upingivik is determined.
- Establish a satellite research camp at Kangalaksiorvik Lake within two years of plan approval.
- Establish a plan for protection of Nachvak Lake by 2028.
- Support and encourage research on the cultural and natural resources of Kangalaksiorvik Lake within five years of plan approval.

7.0 Zoning

The Parks Canada zoning system is a national system, which identifies the types of activities for specific areas of a national park based on ecological and cultural resource sensitivities and the types of visitor experiences that can be sustained in the long-term. Zoning is a management tool intended to support the park vision and provide, on a map, a summary of the park management objectives.

The Cooperative Management Board continues to focus on facilitating experiences that help visitors enjoy, discover, and learn about the park and the defining relationship Inuit have with the land. The park zoning reflects this approach and the direction in the Foundation Agreements, namely, to manage visitor activities and to protect the cultural
resources and ecosystems in order to maintain the ecological integrity, cultural heritage values and Inuit cultural practices (e.g., harvesting, hunting etc.) in the national park. Park zoning does not affect the rights and interests of the Labrador Inuit and Nunavik Inuit that are outlined in the land claim agreements and/or PIBAs.

Zone II – Wilderness has been identified as the predominant zone for the park. This zone reflects the vast majority of the park and the opportunity for visitors to experience firsthand the natural and cultural features of Tongait KakKasuangita SilakKijapvinga with few, if any, rudimentary services and facilities. A relatively small area of Zone III – Natural Environment has been identified at Aggigiak, which will be a satellite camp for visitors that serves as an interpretive site for cultural resources and a launching point for multi-day hiking routes.

As more is learned about the park’s natural and cultural resources, more detailed zoning and/or declared wilderness areas may be considered by the Cooperative Management Board. The management areas that have been identified will continue to be the focus during the implementation of this plan in the locations identified on the zoning map.

Park Access
Tongait KakKasuangita SilakKijapvinga is a remote northern park which is difficult to access. Access in the summer is by aircraft or boat charter usually from Goose Bay, Labrador or Kuujjuaq, Nunavik. Inuit access the park in winter on snowmobile. Parks Canada administers a strict aircraft landing policy in the park to protect the safety of visitors and to protect the ecological and cultural resources in the park. Visitor access to management areas will be determined through strict guidelines developed by Parks Canada in collaboration with the Cooperative Management Board to ensure visitor safety and the protection of natural and cultural resources in the park.
Map 3 Tongait KakKasuangita SilakKijapvinga Zoning
